

Web Application Development

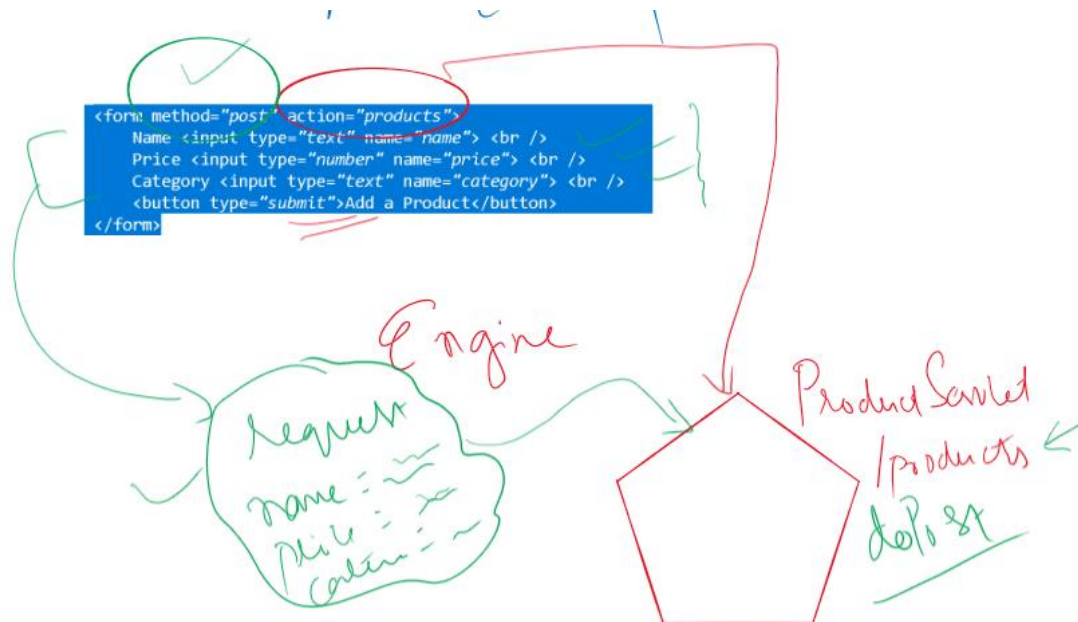

Private, public, default and protected scope:

Web
application
Dev

Create Servlet

Create Servlet
Specify class file destination.

Project: databaseexample
Source folder: /databaseexample/src/main/java
Java package: com.cisco.pg.web
Class name: ProductServlet
Superclass: javax.servlet.http.HttpServlet
☐ Use an existing Servlet class or JSP
Class name: ProductServlet

< Back Next > Finish Cancel

Next>

Create Servlet
Enter servlet deployment descriptor specific information.

Name: ProductServlet
Description:

Initialization parameters:

Name	Value	Description
------	-------	-------------

URL mappings:
/products

☐ Asynchronous Support

< Back Next > Finish Cancel

Next>

Create Servlet
Specify modifiers, interfaces to implement, and method stubs to generate.

Modifiers: ☐ public ☐ abstract ☐ final

Interfaces:

Which method stubs would you like to create?

☐ Contractions from superclass
☒ Inherited abstract methods

<input checked="" type="checkbox"/> doPost	<input type="checkbox"/> doPut	<input type="checkbox"/> doDelete
<input type="checkbox"/> doHead	<input type="checkbox"/> doOptions	<input type="checkbox"/> doTrace

< Back Next > Finish Cancel

doGet
doPost

web.xml

```
@WebServlet("/products")  
public class ProductServlet extends HttpServlet {  
    private static final long serialVersionUID = 1L;  
}
```

ORM

ORM → Order Application

```
@Entity
@Table(name="customers")
public class Customer {
    @Id
    private String email;
```

```
@Entity
@Table(name="orders")
public class Order {
    @Id
    @GeneratedValue(strategy = GenerationType.IDENTITY)
    @Column(name="order_id")
    private int orderId;

    @ManyToOne
    @JoinColumn(name="customer_fk")
    private Customer customer;
```

```

@Repository
public class EmployeeDaoMySQLImpl implements EmployeeDao {
    @Override
    public void printEmployee() {
        System.out.println("Employee stored in MySQL!!!");
    }
}

```

```

@Service
public class SampleService {
    @Autowired
    private EmployeeDao empDao;

    public void doTask() {
        empDao.printEmployee();
    }
}

```

Application Context

```

@SpringBootApplication
public class DemoApplication {
    public static void main(String[] args) {
        SpringApplication.run(DemoApplication.class, args);
    }
}

```

→ @EnableAutoConfiguration
↓ find files

@ComponentScan
↳ com.iris

http://localhost:9999/api/products

```

@RestController
@RequestMapping("/api/products")
public class ProductController {
    @Autowired
    private OrderService service;

    @GetMapping()
    public @ResponseBody List<Product> fetchProducts() {
        return service.getProducts();
    }

    @PostMapping()
    public @ResponseBody Product addProduct(@RequestBody Product p) {
        service.addProduct(p);
        return p;
    }
}

```

Convert List to representation.
